BIO:

Steve Roemerman is the CEO and founder of Incucomm, a communications incubator, focused on supporting the needs of founders and early stage companies in the telecom market. Steve is a Senior Member of the IEEE, and recognized by the IEEE for early work in the conversion from analog to digital. Since the early 1970s, he has been involved with a number efforts that changed the state of the art, among them the first 16-bit microprocessor, F-117 stealth fighter, early PC's, and E-Commerce theory. He has been a consultant to major corporations, governments, and to early stage technology companies. He was Vice President for Systems Strategy at Texas Instruments, a Vice President for Raytheon, and CEO of Crosspan, a company that built OEM wireless telecommunications equipment.
